

Objective:

To analyze the relationship between Bitcoin market sentiment and trader performance using historical trading data.

Datasets Used:

1. Bitcoin Fear & Greed Index Dataset
2. Historical Trader Data from Hyperliquid

Tools Used:

- Python
- Pandas
- Matplotlib
- PyCharm

Analysis Performed:

- Data cleaning
- Date conversion
- Dataset merging
- Profit analysis
- Graph visualization

Key Insights:

- Trader profitability changes according to market sentiment.
- Average Closed PnL varies during Fear and Greed periods.
- Market sentiment affects trading behavior.

Conclusion:

This project demonstrates that market sentiment influences trader performance and profitability.
